Resetting the TYDOM, Thermostat and Receivers

Your Equipment:

Home Automation Gateway - TYDOM 1.0
Thermostat - TYBOX 5101
Receiver - RF6630/6640

1. Open the TYDOM app and open the menu (in the top left corner)
2. Choose "My devices" and select the product you wish to delete.
3. Open the Advanced options and select "Delete"
4. Confirm the Deletion by pressing "OK"
5. On the thermostat press and hold the "MODE" and "+" buttons for 5 seconds until you see the "rF01"
6. Press and hold "-" for 3 seconds until the thermostat displays "rF00"
7. Go to the receiver (wired into the Radiator) and press and hold the Receiver button down for 30 seconds to delete the association on there. The lights will flash quickly at the end and then they will go off.

Now that they have all been deleted turn off the power to the radiator and then back on again.

Now re-associate the thermostat to the receiver:

1. Press and hold the receiver button for 3 seconds so that the LED light begins to flash.
2. Go to the thermostat and press and hold the "MODE" and "+" buttons until it displays "rF00"
3. Press the "+" button once to make the "00" flash and it should change to "01" indicating it's been paired with the receiver.
4. Once it has stopped flashing, press the "MODE" and "+" buttons once and you'll return to temperature.

Finally associate the receiver back to the TYDOM app:

5. Open the app once again and open the settings menu
6. Choose "My devices" and select "Add a device"
7. Select "Heating" then "Electrical and choose the bottom icon (Minor 1000/RF6620/6630/6640)
8. Press and hold the receiver button for 3 seconds to re-enter the association mode
9. Then press "To Associate"
10. It should then come up with 1 product associated and allow you to rename the receiver.
11. Please do check and make sure that the radiator comes on by adjusting the heating.
